

# Skin Lesion Diagnosis Report

Patient Name: Tinesh

Date: 2025-11-03 18:28:42

**Predicted Disease:** Basal Cell Carcinoma

## Class Probabilities:

- Actinic Keratoses (Solar Keratoses) / Bowen's disease: 25.19%
- Basal Cell Carcinoma: 39.16%
- Benign Keratosis (Seborrheic Keratosis): 6.16%
- Dermatofibroma: 7.89%
- Melanoma: 13.23%
- Melanocytic Nevi (Common Moles): 6.98%
- Vascular Skin Lesion: 1.37%

## Symptoms:

- Shiny, pearly bump or pink growth on sun-exposed skin.
- May bleed, ulcerate, or form a sore that won't heal.
- Sometimes appears as a flat, scaly patch with rolled edges.
- Common on the face, nose, ears, neck.
- Slow growth but may invade nearby tissue if untreated.

## Suggested Treatment:

- Seek dermatologist for early removal (surgical excision or Mohs surgery).
- Alternative options: curettage, electrodessication, topical therapy for superficial lesions.
- Avoid sun exposure; use sunscreen and protective clothing.
- Regular skin checks to detect recurrence or new tumors.
